

ABDULAZİZ ÖNER

AI & Data Engineering Student | Open to Internship and Junior AI/Data Roles

abdulazizoner@gmail.com | +90 545 244 7527 | Hatay, Turkey | Portfolio | GitHub | LinkedIn

SUMMARY

Artificial Intelligence and Data Engineering student at Firat University with hands-on work in AI-focused web products, NLP/text-classification prototypes, and data analysis. Currently building a project portfolio around TrendAI, Turkish legal-risk NLP, and FiratAsistan. Strong foundation in Python, SQL, analytics tools, and project-based learning; looking to contribute to internship or junior roles involving AI, data engineering, analytics, and software-oriented problem solving.

SELECTED PROJECTS

TrendAI - AI Discovery and Content Platform

Portfolio project | AI tools, model tracking, web product concept

- Developing a web platform concept for tracking new AI models, tools, and ecosystem updates from sources such as GitHub and Hugging Face.
- Designed the product direction around discoverability, AI-focused articles, and a future RAG-supported chat experience using Gemini API concepts.
- Used the project as a practical case study for AI product thinking, data collection, API integration, and portfolio-level technical communication.

Turkish Legal-Risk Text Classification / Social Media Crime Detection

NLP prototype | Turkish text analysis, classification, legal-domain data preparation

- Built a research-oriented NLP prototype for analyzing Turkish social media text and identifying potential legal-risk categories based on structured labels.
- Prepared text data through scraping, preprocessing, keyword/legal-text comparison, and classification-oriented dataset design.
- Considered privacy, ethical use, and data protection requirements such as KVKK/GDPR during the project design.

FiratAsistan - University-Focused AI Assistant

AI assistant project | RAG-oriented architecture, backend/frontend quality focus

- Worked on a university assistant concept that combines document-grounded responses, backend APIs, and user-facing assistant flows.
- Used the project to practice production-oriented thinking: route contracts, privacy-sensitive design, testing gaps, and deployment readiness reviews.

SKILLS

Programming & Data	Python, SQL, C, data preprocessing, web scraping, API integration, Git/GitHub
AI / NLP	NLP basics, text classification, RAG concepts, LLM API usage, prompt engineering fundamentals
Analytics & BI	Power BI, Tableau, Google Sheets, Looker Studio, Google Analytics, Amplitude, BigQuery
Professional	Analytical thinking, attention to detail, fast learning, teamwork, clear technical communication

EDUCATION & CERTIFICATES

Firat University	2024 - Ongoing
Artificial Intelligence and Data Engineering	
IT School GoIT	Completed
Data Analyst Certificate
